

Custom Colour Branding

Introduction

New development to include custom colours throughout your AssessNET system. Colours can be customised per each area of the system. From menus, buttons, hover overs and panels, AssessNET can be personalised to corporate colour branding schemes.

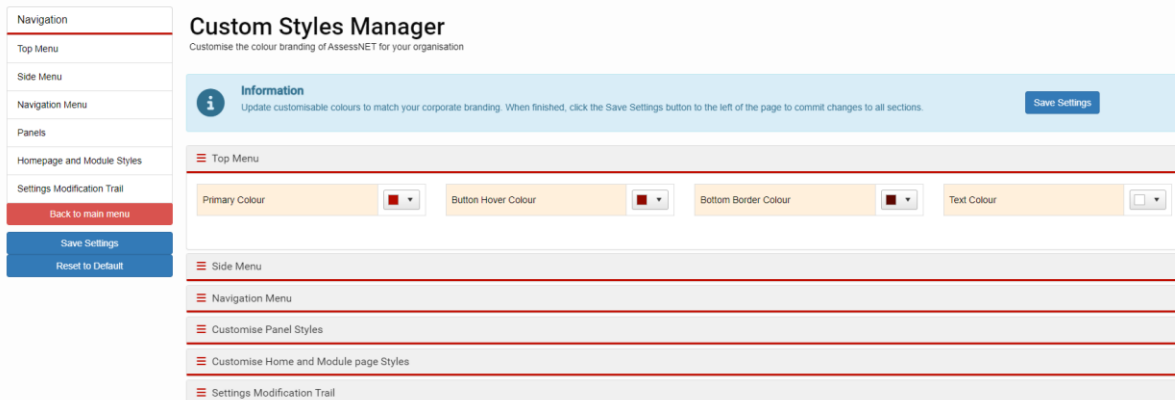

How to access the new feature

Users with administrator access can access the new development via the Administration menu, then by clicking General Admin. At the bottom of this page, you will see the new Custom Colours Configuration option.

**Custom Colours Configuration**
Manage colour schemes within AssessNET's Pages and Menus.

Start creating your custom colours

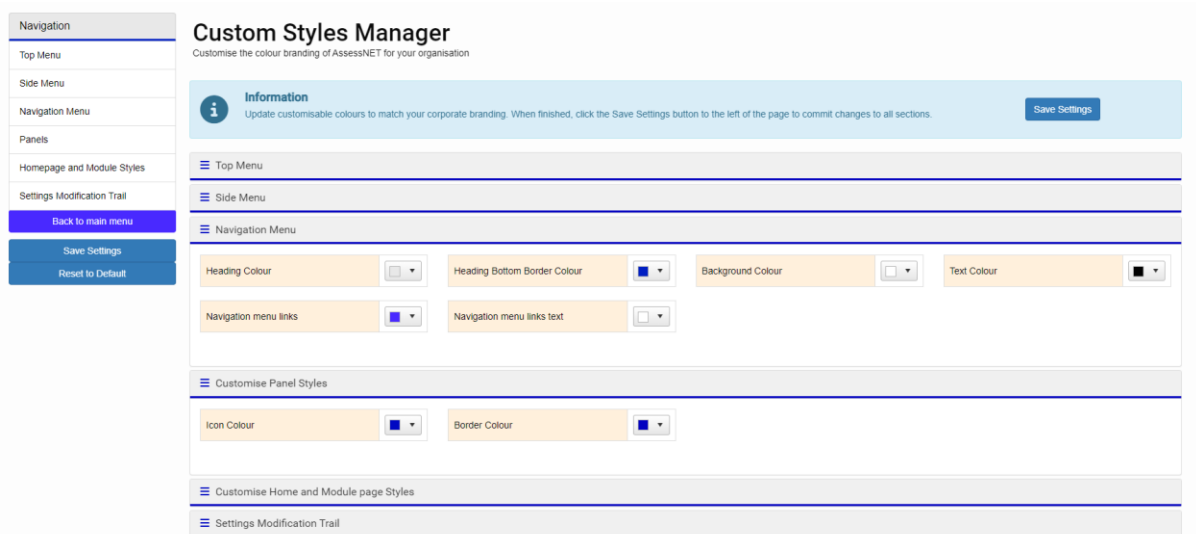

When accessing the page for the first time, you will be displayed with the default / your current colour scheme.

The screenshot shows the 'Custom Styles Manager' interface. On the left is a navigation sidebar with options: Navigation, Top Menu, Side Menu, Navigation Menu, Panels, Homepage and Module Styles, and Settings Modification Trail. Below these are buttons for 'Back to main menu', 'Save Settings', and 'Reset to Default'. The main content area is titled 'Custom Styles Manager' and includes an 'Information' box with a 'Save Settings' button. Below this is a list of sections: Top Menu, Side Menu, Navigation Menu, Customise Panel Styles, Customise Home and Module page Styles, and Settings Modification Trail. The 'Top Menu' section is expanded, showing four color selection fields: Primary Colour, Button Hover Colour, Bottom Border Colour, and Text Colour, each with a color swatch and a dropdown arrow.

Custom colours have been broken down into different sections. Menus, Panel Styles, Home and Module page styles. To access each section, click on each of the headings to open up that area.

As you start to update colours, these will be immediately previewed to you on screen, within the page, to give you the best view of how the changes will look once set system wide.

There are several default colours that can not be updated. These are usually information banners or buttons that are presenting specific information on screen. For example, warnings will remain in yellow or red, while confirmation messages and buttons will remain green.

PLEASE NOTE: These changes are not saved until you click the Save Settings button. If at any time you leave the page, any unsaved changes will be reset.

Commit your changes

Before any changes take affect, you will need to commit the update by clicking the Save Settings button. Once saved, your updated style sheet will be queued for processing. This will usually take up to 10 minutes to complete and for you to see your changes throughout the system.

PLEASE NOTE: Changes will apply to all users of your contract, not just your own account.

Once processed, the Home page, Task manager, Module page and each area of your modules will reflect the update colour scheme.
